i The custom domain feature has been migrated here from Google Apps. To get started, verify ownership of your domains by completing step 1 [here](#).

Custom Domains

Set up a custom domain name to route requests for the domain to your app. You can use your own DNS provider, or let Google host the name with Cloud DNS. If you don't have a domain yet, you can register a new domain with Google Domains.

Only domains for which you are an owner are shown. Other administrators may have domain mappings for this project that are not visible.

1. If you haven't already, verify that you own the domain. It will then be added to the list in step 2.

2. Select the domain you want to point to **astute-curve-100822**:

  .

3. Create a resource record for the doxsey.net domain using values as shown:

Type: CNAME

Alias: bootcamp-example

Canonical name: ghs.googlehosted.com

It may take up to 24 hours for DNS changes to take effect
