

go get

let's see how go get
goes and gets code so we can use it

go get

download and install packages and dependencies

go get

allows us to go get code → this brings the code into our workspace where we can use it.

I'm going to “go get” the **golangtraining** code we just created ...
... but first ...

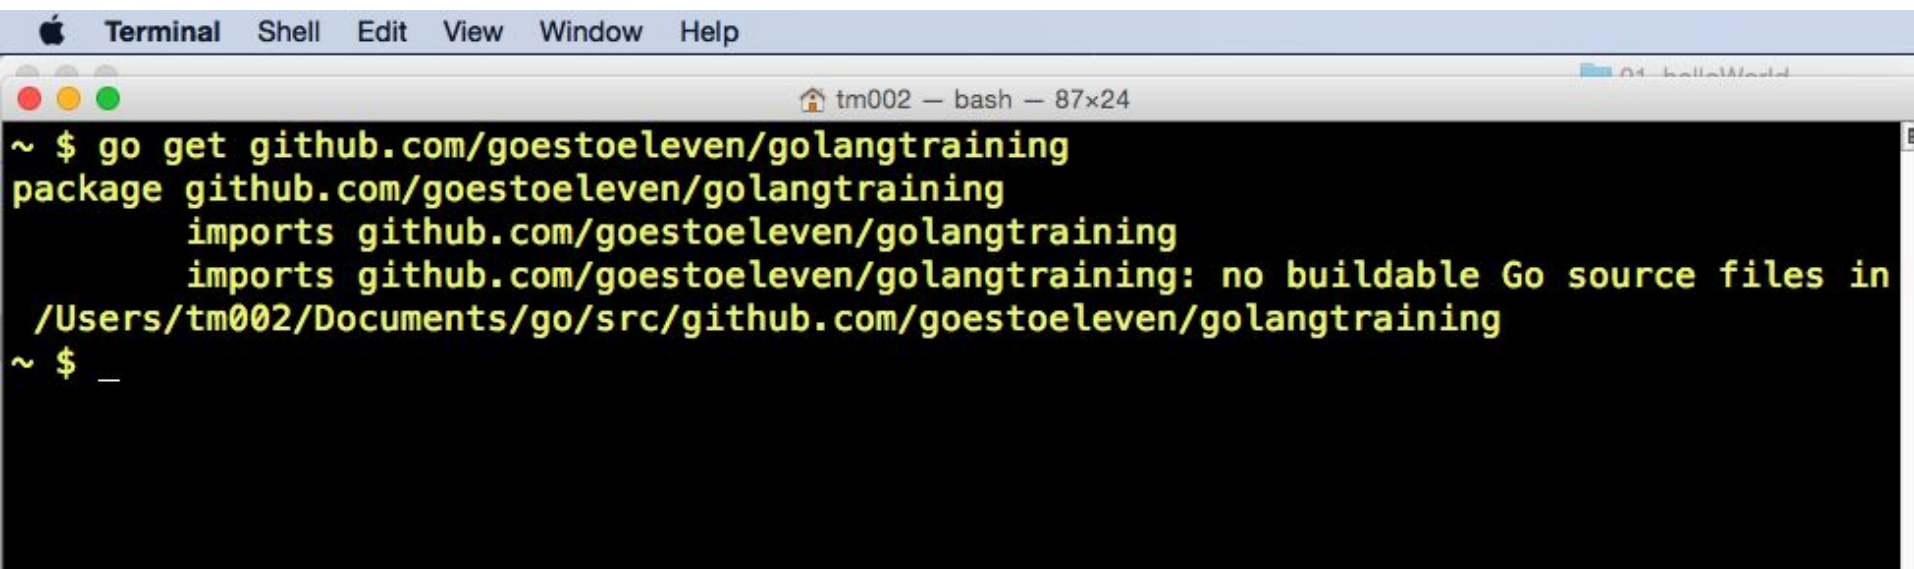

... I'm going to rename my package so that when I "go get" the golangtraining package, it won't already exist in my workspace

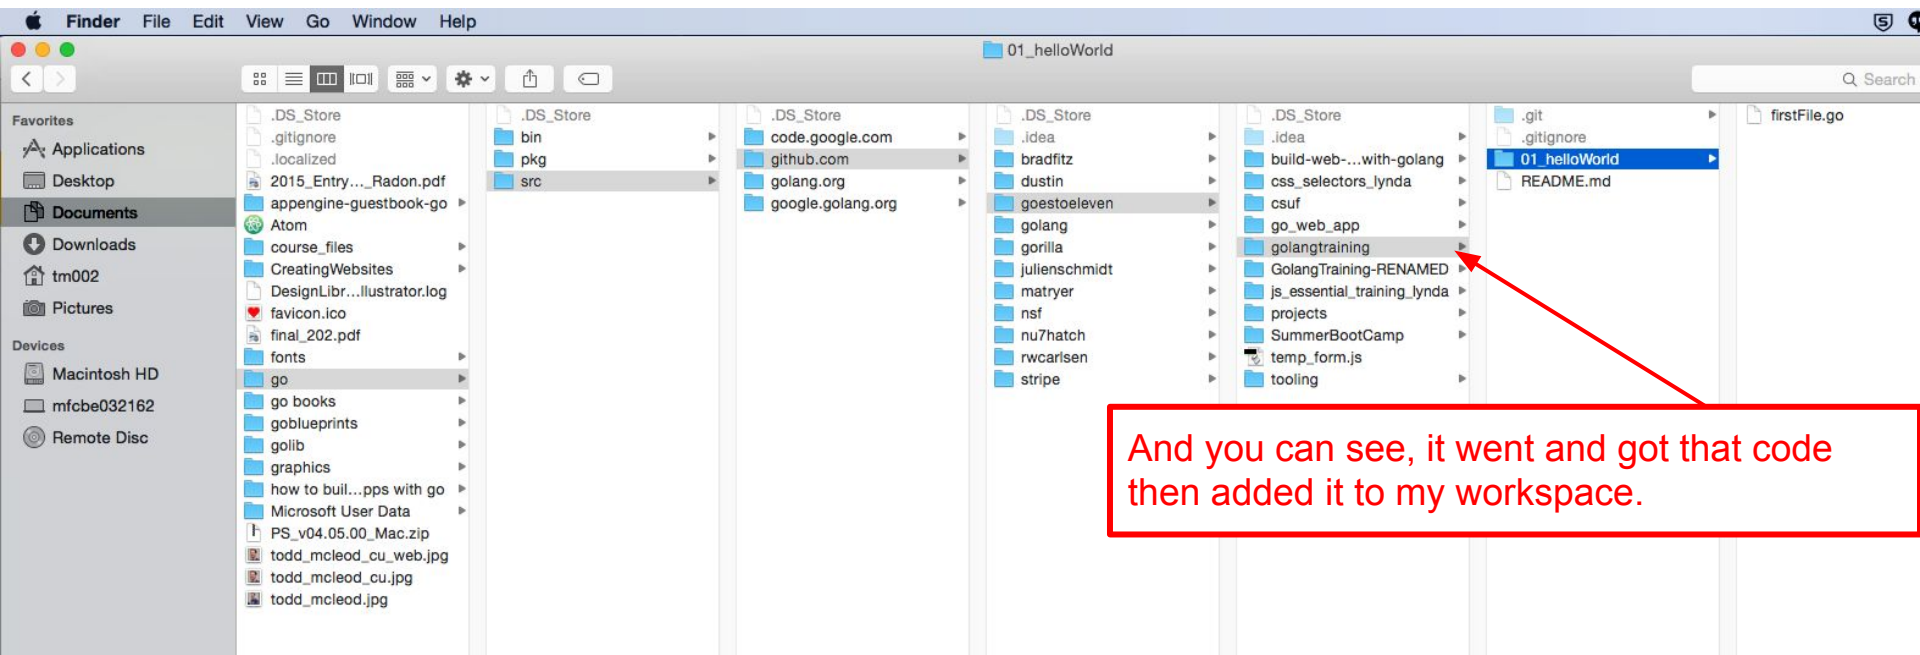

Now I'll run this command at the terminal ...

```
go get github.com/goestoeleven/golangtraining
```

Now I'll run this command at the terminal ...

A screenshot of a macOS Terminal window. The title bar shows 'Terminal' with menu options 'Shell', 'Edit', 'View', 'Window', and 'Help'. The window title is 'tm002 — bash — 87x24'. The terminal content shows a Go command being executed, which results in an error message about missing buildable Go source files.

```
~ $ go get github.com/goestoeleven/golangtraining
package github.com/goestoeleven/golangtraining
    imports github.com/goestoeleven/golangtraining
    imports github.com/goestoeleven/golangtraining: no buildable Go source files in
/Users/tm002/Documents/go/src/github.com/goestoeleven/golangtraining
~ $ _
```

Review

- create a new github **repo**
- clone the repo to your desktop
 - choose the correct location
- sequentially organizing go code
- idiomatic
- **.gitignore**
- .gitignore settings
- using webstorm for github commits
- checking commits
 - using “**git log**” at terminal
 - on github.com
- re-creating “hello world”
- **go get**

id·i·o·mat·ic

/ˌɪdēəˈmɑdɪk/

adjective

1. using, containing, or denoting expressions that are natural to a native speaker.
"distinctive idiomatic dialogue"
synonyms: vernacular, colloquial, everyday, conversational; [More](#)
2. appropriate to the style of art or music associated with a particular period, individual, or group.
"a short Bach piece containing lots of idiomatic motifs"

Review Questions

Github

- if you haven't done so already
 - create a github.com account
 - create a repo for this class
 - add a .gitignore file
 - if you are using webstorm, modify the .gitignore file appropriately
 - take a screenshot of your .gitignore file
 - put the screenshot in your Google Drive document which you will submit for this assignment
 - note: taking screenshots only applies to students taking my course; if you are viewing these resources and you are not in my course, please please please do not randomly send me screenshots.

Github

- create the “hello world” program
- commit your code to github
- look at your “hello world” code on github
 - take a screenshot of this
 - put the screenshot in your Google Drive document which you will submit for this assignment
 - (I am not going to repeat these instructions again, so remember to put screenshots in your Google Drive document when you see “take a screenshot of this”)

Github

- run **git log** at the terminal
- **take a screenshot of this**

go get

- use godoc.org to find some package
- run **go get** at the terminal to get that package
- look in finder to see where that package was stored
 - **take a screenshot of this**
- delete the package from your workspace
